Nov	18-Nov 3.30-4.40	FECS	AI Computer Vision: Bridging the Research Commercialisation Gap With years of research experiences, we discover many good researches with great novelty are kept in libraries. Sadly, it happens because of the existing gap between academic research and industrial implementation. Many researches are carried based on simulated/controlled environment without considering much on the real industrial problems. Furthermore, it may also due to insufficient experiences in commercialising the researches. On the other hand, industrial players have limited contacts to reach research consultant, particularly from universities and it end up the industry players to buy solution from the foreign companies. We observe it is still lack of an ecosystem between academia and industry. Motivated by the gap, we founded NEUON AI to bridge between the academic research to solve real industry problems, focusing on three main fields I.e., computer vision, machine learning and IoT. We have been collaborated with several institutes and universities to address the industry problems. Looking forward to share with the topics of interest and opportunities. We hope to have you to join our journey in delivering the values to the industry. https://neuon.ai/	Dr. KC Chai (External) (CEO of NEUON AI)	All FECS academic staff
